Work Experience

Senior Software Engineer | Dot AI

February 2024 – Present

- Spearheaded frontend modernization initiatives for an AI-powered logistics intelligence platform, improving application scalability, consistency, and enterprise workflow usability across customer-facing modules.
- Architected a scalable dual-design migration strategy enabling legacy and modern UI systems to coexist, accelerating modernization without disrupting ongoing product delivery.
- Reduced bundle size by **30%** and improved application load performance by **35%** through route-based code splitting, lazy loading, rendering optimization, memoization, and asset optimization strategies.
- Revamped high-volume real-time map tracking infrastructure using Leaflet clustering and rendering optimization techniques to efficiently support **10k+ live asset markers** with improved rendering stability.
- Led migration to **Next.js App Router** architecture and established reusable component-driven frontend foundations using Material UI and TypeScript.
- Introduced frontend engineering standards including reusable architecture patterns, linting, documentation practices, scalable folder structures, and testing foundations using Jest and React Testing Library.
- Implemented **WCAG 2.2** accessibility standards and enhanced authorization workflows using **ABAC** models integrated with **Keycloak** and **NextAuth**.
- Collaborated with backend and DevOps teams to optimize API contracts, caching strategies, CI/CD workflows, and frontend-backend integration efficiency.
- Actively contributed to sprint planning, technical estimations, architecture discussions, and pull request reviews while mentoring developers on React architecture and frontend performance best practices.

Technology Stack: React.js, Next.js, TypeScript, JavaScript, Redux Toolkit, Material UI, HTML5, CSS3, Jest, React Testing Library, Keycloak, Leaflet, Material React Table, TanStack Query, GitLab, ESLint, Prettier, Husky

Senior Software Developer | Hexagon

September 2021 – January 2024

- Led development of enterprise analytics dashboards and data visualization workflows using React.js, Redux, Ag-Grid, and Highcharts for critical business insights.
- Delivered POCs and production-ready scalable grid and charting solutions, improving dashboard rendering performance and user interaction efficiency.
- Built reusable component-driven frontend architecture using React.js, TypeScript, SCSS, and Material UI to enhance maintainability and consistency.
- Collaborated with cross-functional teams on sprint planning, backlog refinement, estimations, and architecture discussions in Agile delivery cycles.
- Managed framework upgrades, dependency modernization, and third-party integrations while ensuring minimal production impact and improved stability.

Summary

Senior Frontend Engineer with 5.4+ years of experience building scalable, high-performance SaaS and enterprise web applications using React.js, Next.js, TypeScript, and modern frontend architectures.

Expertise in frontend architecture, design systems, performance optimization, accessibility (WCAG 2.2), and enterprise-grade UI engineering. Proven track record of leading frontend initiatives, mentoring developers, and delivering scalable platforms with real-time workflows and high-volume data visualization.

Experienced in collaborating with product, backend, and DevOps teams to deliver scalable, maintainable, and customer-focused solutions in Agile environments.

Education

Bachelor's in computer science and engineering

Chandigarh University

2017– 2021

CGPA - 7.69

Achievements

High-Impact Contribution Recognition | Dot AI

Demonstrated technical ownership, decisive problem-solving, and delivery excellence, later advancing into frontend leadership and guiding team initiatives.

Pat on the back award | Hexagon

Got 2 pat on the back award for consistently delivering exceptional results and demonstrating outstanding performance

- Contributed to REST API design discussions and optimized frontend-backend integration for efficient data handling.

Technology Stack: HTML5, CSS3, SCSS/SASS, React.js, Redux, JavaScript, TypeScript, Material UI, Neo4j, .NET Core, Jest, Enzyme, Kafka

Software Developer | Daffodil Software

January 2021 – September 2021

- Developed scalable React.js applications and reusable UI components with focus on maintainability, asynchronous workflows, and responsive user experiences.
- Optimized Node.js and Express.js APIs by restructuring endpoints and improving query efficiency, reducing redundant data fetching and improving frontend responsiveness.
- Built and optimized full-stack workflows using React.js, Node.js, Express.js, and MongoDB across multiple business modules.
- Resolved critical production issues and implemented frontend optimizations that improved application stability, functionality, and performance.

Technology Stack: HTML5, CSS3, React.js, Redux, JavaScript, TypeScript, Material UI, jQuery, MongoDB, Node.js, Express.js

Projects

Dot Oracle | Dot Ai

Dot Oracle is an AI-powered Asset Intelligence SaaS platform integrated with IIoT hardware, enabling real-time monitoring, tracking, and management of assets. The platform enhances operational visibility, supply chain efficiency, safety, and decision-making across logistics and multiple industry domains.

- Independently developed **13 of 17 core enterprise modules** for a real-time AI-powered logistics and asset intelligence platform.
- Led a phased frontend transformation strategy enabling legacy and redesigned applications to coexist using Next.js hybrid routing, ensuring smooth migration, zero-downtime rollout, and seamless user transition.
- Rebuilt the new application from scratch by redesigning and developing core business modules with a scalable component-driven architecture, improving maintainability and UI consistency.
- Implemented secure enterprise authorization workflows using Keycloak, NextAuth, RBAC, and ABAC-based access control models.
- Led frontend modernization initiatives including Next.js 14 migration, Material UI v5 upgrades, reusable design system foundations, and scalable shared component architecture.
- Introduced frontend testing practices along with performance optimizations including API caching, lazy loading, and virtualization for high-traffic workflows.
- Collaborated with product, backend, DevOps, and design teams to deliver scalable SaaS platform capabilities in Agile environments.

Knowledge Base / Docs Portal | Dot Ai

Docs Portal is a centralized role-based documentation platform built for customers and internal teams to efficiently manage and maintain technical documentation.

- Developed enterprise documentation platform using **Docusaurus** and React.js to centralize technical documentation workflows.
- Integrated **Decap CMS** enabling non-technical teams to manage and publish documentation independently.
- Implemented role-based access workflows, documentation versioning, and automated deployment pipelines using GitLab CI/CD.

Reward and recognition | Daffodil Software

Recognized for rapid issue resolution, product quality improvements, and timely delivery of critical production fixes.

Technical Skills

Frontend Technologies:

React.js, Next.js, JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS/SASS, Tailwind CSS, Material UI, ShadCN UI, Bootstrap

State Management & Data Fetching:

Redux, Redux Toolkit, TanStack Query, Context API

Testing:

React testing library, Jest and Enzyme

UI Engineering & Visualization:

Ag-Grid, Highcharts, Chart Js, Material React Table, Tanstack Table

UI Engineering & Visualization:

Leaflet, OpenLayers, Google Maps

Frontend Architecture & Performance

Frontend Architecture, Design Systems, Component-Driven Development, Performance Optimization, Code Splitting, Lazy Loading, Memoization, Accessibility, Responsive Design, SEO Optimization, RBAC/ABAC Authorization, Micro Frontend

Tools:

Git, GitLab, GitLab CI/CD, Bitbucket, Jira, Husky, Docker, Postman, Swagger, Figma, Adobe XD, VS Code, Visual Studio
