PROFESSIONAL SUMMARY

Senior Frontend Engineer with 5.7 years of experience architecting and building scalable, high-performance SaaS and enterprise web applications with React.js, Next.js, and TypeScript. Specialized in frontend architecture, reusable design systems, rendering and load-time performance optimization, and high-density real-time data interfaces. Proven record of leading frontend modernization, establishing engineering standards, and mentoring developers while partnering with product, backend, and DevOps teams in Agile environments.

TECHNICAL SKILLS

Languages: JavaScript (ES6+), TypeScript, HTML5, CSS3, SCSS/SASS

Frontend & Frameworks: React.js, Next.js (App Router), Redux Toolkit, TanStack Query, Context API, Material UI, ShadCN UI, Ant Design, Tailwind CSS, Bootstrap

Architecture & Performance: Component-Driven Development, Design Systems, Reusable Components, Micro Frontends, Code Splitting, Lazy Loading, Memoization, Virtualization, Core Web Vitals, Web Performance Optimization, Lighthouse, Browser DevTools, Progressive Web Apps (PWA), Web Workers, Responsive Design, SEO, Accessibility (WCAG 2.2)

APIs & Real-Time: REST APIs, GraphQL, Apollo Client, WebSockets, Server-Sent Events (SSE)

Data Visualization & UI Engineering: AG Grid, Highcharts, Chart.js, Material React Table, TanStack Table, Leaflet, OpenLayers, Google Maps

Testing: Jest, React Testing Library, Enzyme

Auth & Security: Keycloak, NextAuth, RBAC, ABAC

Build & Tooling: Vite, Webpack, Babel, npm / pnpm / Yarn, Git, GitLab, GitLab CI/CD, Bitbucket, Docker, ESLint, Prettier, Husky, Jira, Agile/Scrum

Backend & Data: Node.js, Express.js, MongoDB, Neo4j, Kafka, .NET Core (integration)

PROFESSIONAL EXPERIENCE

Senior Software Engineer · Dot AI Feb 2024 – Jul 2026

AI-powered logistics & asset-intelligence SaaS platform (Dot Oracle) integrated with IIoT hardware for real-time asset monitoring and tracking.

- Led frontend modernization of a customer-facing enterprise platform, independently building 13 of 17 core modules on a scalable, component-driven architecture.
- Architected a dual-design migration on Next.js App Router hybrid routing that let legacy and redesigned UIs coexist, enabling zero-downtime rollout and seamless user transition.
- Reduced bundle size by 30% and improved load performance by 35% through route-based code splitting, lazy loading, memoization, rendering optimization, and asset optimization.
- Re-engineered high-volume real-time map tracking with Leaflet clustering and rendering optimization to stably render 10,000+ live asset markers.
- Established frontend engineering standards (reusable patterns, scalable structure, testing with Jest and React Testing Library) and implemented WCAG 2.2 accessibility plus enterprise authorization (Keycloak, RBAC/ABAC).
- Partnered with backend and DevOps on API contracts, caching, and CI/CD, and mentored developers through code reviews and architecture discussions.

Senior Software Developer · Hexagon Sep 2021 – Jan 2024

- Led development of enterprise analytics dashboards and data-visualization workflows (React.js, Redux, AG Grid, Highcharts) over high-density datasets, delivering production-grade grid and charting solutions with improved rendering performance.

- Built reusable, component-driven frontend architecture with React.js, TypeScript, SCSS, and Material UI to improve maintainability and UI consistency.
- Managed framework upgrades, dependency modernization, and third-party integrations with minimal production impact and improved stability.
- Contributed to REST API and GraphQL design and optimized frontend-backend integration for efficient data handling; collaborated cross-functionally across sprint planning, backlog refinement, and estimations in Agile cycles.

Software Developer • [Daffodil Software](#) Jan 2021 – Sep 2021

- Built scalable React.js applications and reusable UI components with responsive, asynchronous data workflows.
- Optimized Node.js and Express.js APIs by restructuring endpoints and improving query efficiency, reducing redundant data fetching and improving frontend responsiveness.
- Delivered full-stack workflows across multiple business modules (React.js, Node.js, Express.js, MongoDB) and resolved critical production issues to improve stability and performance.

KEY PROJECTS

Dot Oracle — AI Asset Intelligence SaaS Platform • [Dot AI](#)

Real-time asset-intelligence SaaS platform integrated with IIoT hardware for live monitoring and tracking across logistics and industrial operations.

- Independently designed and delivered 13 of 17 core modules, owning frontend architecture end to end and rebuilding the platform on a scalable, component-driven React and TypeScript foundation.
- Built the real-time operational map engine — Leaflet clustering, viewport culling, and batched marker updates — to render tens of thousands of live IIoT assets with smooth pan and zoom.
- Engineered high-density enterprise workflows: virtualized data grids, multi-step forms, and live dashboards tuned for large datasets via memoization, windowing, and request caching.
- Modernized the platform with a reusable design system and shared-component architecture (Next.js 14, Material UI v5) plus enterprise authorization (Keycloak, RBAC/ABAC) adopted across all modules.

CoBoard • [Personal Project](#) [Live Demo](#)

A real-time, multiplayer infinite-canvas whiteboard — create a board, share the link, and draw together instantly with no signup required.

- Designed and built a full multiplayer whiteboard engine from scratch — freehand drawing, shapes, arrow binding, and bound text labels — using React, TypeScript, and react-konva.
- Engineered an operation-based real-time sync protocol over Supabase Realtime with last-write-wins conflict resolution, keeping every client deterministic without a full CRDT.
- Designed message-budget-aware broadcasting (throttled cursor/drag updates, payload size limits) to run sustainably within Supabase's free-tier connection and message limits.
- Built full state persistence and recovery — debounced snapshot writes to Postgres, hydration replay, and auto-reconnect with exponential backoff — so a board reloads exactly as it was left.
- Shipped an accessible, mobile-capable UI (WAI-ARIA toolbar pattern, keyboard shortcuts, touch drawing and pinch-zoom) deployed on Vercel Hobby with zero infrastructure cost.

EDUCATION

B.E., Computer Science & Engineering

Chandigarh University • 2017 – 2021 • CGPA 7.69

ACHIEVEMENTS & RECOGNITION

- **High-Impact Contribution Recognition — [Dot AI](#):** Demonstrated technical ownership, decisive problem-solving, and delivery excellence, later advancing into frontend leadership and guiding team initiatives.
- **“Pat on the Back” Award (x2) — [Hexagon](#):** Recognized for successfully delivering critical features on time, demonstrating strong ownership, execution, and a consistent focus on meeting key delivery commitments.
- **Zero-Downtime Platform Migration — [Dot AI](#):** Architected and led a phased migration strategy that let legacy and modern UI systems coexist, so the transition never disrupted active enterprise customers.
- **Reward and Recognition — [Daffodil Software](#):** Recognized for rapid issue resolution, product quality improvements, and timely delivery of critical production fixes.
